J. Biol. Chem. 276:45892-45887(2001).
-- FUNCTION: Adhesive glycoprotein that mediates cell-to-cell and cell-to-matrix interactions. Can bind to fibrinogen, fibronectin, laminin and type V collagen.
-- SUBDIAT: Homotrimer; disulfide-linked.
-- SIMILARITY: Belongs to the thrombospondin family.
-- SIMILARITY: Contains 1 WPC domain.
-- SIMILARITY: Contains 3 EGF-like domains.
-- SIMILARITY: Contains 7 TSP type-1 domains.
-- SIMILARITY: Contains 1 TSP type-1 domains.
-- SIMILARITY: Contains 1 TSP Vive-1 domains.
-- SIMILARITY: Contains 1 TSP Vive-1 domains.

Submitted (APR-1998) to the EMBL/GenBank/DDBJ databases.
-: FUNCTION: May act as positive axonal guidance cues.
-: SUBCELLULAR LOCATION: Type I membrane protein.
-: SIMILARITY: Belongs to the semaphorin family.
-: SIMILARITY: Contains 1 Sema domain.
-: SIMILARITY: Contains 7 TSP type-I domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          SEMAPHORIN SA. -!- FUNCTION: May act as positive axonal guidance cues.
-!- SUBCELIDIAR LOCATION: Type I membrane protein.
-!- TISSUE SPECTFICITY: IN ADULT, DETECTED IN LIVER, BRAIN, KIDNEY, HEART, LUNG AND SPLEEN.
                                                                                                   -!- DEVELOPMENTAL STAGE: DIFFERENTIALLY EXPRESSED IN EMBRYONIC AND ADULT TISSUES. ITS ABUNDANCE DECREASES FROM E10 TO BITH.
-!- SIMILARITY: Belongs to the semaphorin family.
-!- SIMILARITY: Contains 1 Sema domain.
-!- SIMILARITY: Contains 7 TSP type-1 domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               R GO; GO:0016021; C:integral to membrane; IDA.
